Technical Meeting on Achievements and Challenges in Radioactive Waste Characterization

**IAEA Headquarters
Vienna, Austria**

10 – 14 October 2022

Ref. No. EVT1904419

Information Sheet

Introduction

The characterization of radioactive waste and waste packages plays an important role during all stages of the predisposal management of radioactive waste. By understanding the characteristics of such waste, it is possible to establish the necessary adjustment, treatment, conditioning or suitability for further handling, processing, transport, storage or disposal. Waste characterization involves all aspects related to the physical, chemical and radiological properties of the waste.

Therefore, the safe management and disposal of radioactive waste is, in part, reliant upon its accurate and quality-assured characterization by non-destructive and destructive methods, and upon determination of the radionuclide inventory. Relevant procedures, standards and laboratory practices have been developed and refined over the years in expert laboratories in those Member States of the International Atomic Energy Agency (IAEA) with mature operating nuclear facilities and laboratories. However, several Member States with less developed programmes do not have such facilities and laboratories. For these countries, establishing fit-for-purpose characterization programmes is a complex technical challenge requiring both intellectual and financial resources.

Over the past decade significant progress has been achieved in the development of waste characterization, control procedures and equipment as a direct response to ever-increasing requirements for quality and reliability of information on waste characteristics. However, some aspects of radioactive

waste characterization remain challenging, such as the estimation of the activity of long lived, difficult-to-measure radionuclides, adequate sampling methodologies, refining the characterization method to achieve more accurate results, the development of scaling factors adapted to the specificity of waste streams, and the characterization of waste for the verification of waste activity before clearance.

This event is being organized by the IAEA as part of the activities planned within the framework of the IAEA's International Network of Laboratories for Nuclear Waste Characterization (LABONET) in order to increase efficiency in sharing international experience in the application of proven, quality-assured practices for the characterization of radioactive waste and waste packages. The exchange of information and best practices in the operation of characterization laboratories is expected to underpin both public and regulatory confidence in the secure management and responsible storage and disposal of radioactive waste.

Objectives

The purpose of the event is for members of the International Network of Laboratories for Nuclear Waste Characterization (LABONET network) to share updated technical information, current practices, and achievements and challenges related to the characterization of low and intermediate level radioactive waste and waste packages.

The meeting will provide a forum for the exchange of information and discussions on good practices, latest developments, challenges and future directions in the area of radioactive waste characterization with the aim to seek suggestions for new activities, particularly those reflecting the needs of Member States in this area.

Target Audience

The event is targeted at representatives of laboratories or organizations in Member States who are responsible for the characterization of low and intermediate level waste and waste packages; who are actively engaged in planning, improving and implementing radioactive waste management programmes; and who are willing to share their experience or gain knowledge on the subject.

Participants from the invited Member States and organizations are expected to attend, as well as representative(s) from the IAEA and the LABONET Steering Committee.

Participants should be operators or managers of radioactive waste processing and storage facilities or who are working in regulatory or supporting organizations with responsibility for the management of low and intermediate level radioactive waste and sealed radioactive sources.

Working language(s)

The working language of the event will be English with no interpretation provided. All communications and papers must be submitted in this language.

Expected Outputs

The event will provide a forum for the exchange of information and discussions on good practices, latest developments, challenges and future directions in the area of radioactive waste characterization, as well as providing the latest state-of-the-art technical methods and technologies to characterization laboratory planners, managers and technicians as well as designers, operators and regulators involved in the management of radioactive waste in Member States.

The expected outputs are:

- To share international experiences and best practices in characterizing radioactive waste streams through presentations; and
- To increase support for organizations or Member States with less advanced programmes for the characterization of low and intermediate level waste, by making available the relevant skills, knowledge, managerial approaches and expertise from Member States with mature operating characterization laboratories.

Structure

The event will include presentations by the participants outlining the experiences and issues of Member States related to the topics mentioned below. Participants are requested to indicate the chosen topic and title of the presentation in the Participation Form (Form A), and to send an abstract of the presentation at least two weeks prior to the event.

The technical programme will consist of plenaries, roundtable discussions and a one-day technical visit to the IAEA Seibersdorf laboratories, if the technical and organizational conditions will allow it. In order to allow sufficient time for topical discussions, the organizers are considering the possibility of holding parallel poster sessions depending on the number of contributed papers received. Plenaries will include presentations and discussions on particular waste characterization programmes and on more focused topics covering the specific areas noted above. The roundtable discussions will focus on relevant issues and topics of common interest.

Topics

The event will involve exchanges on practices and trends in radioactive waste characterization covering relevant areas, including:

- Challenges in radioactive waste characterization: from planning to deployment;
- The role of characterization in the establishment of an inventory and waste management planning’;
- Non-radiological characterization of radioactive waste: case studies, examples of good practices, challenges encountered and potential technical approaches and solutions;
- Updates on international and European research and development projects and networks; the role of research and development in waste characterization;
- Sampling for characterization and the impact on further waste processing activities;
- LABONET achievements over the year: events, projects, network, working groups.

Participation and Registration

All persons wishing to participate in the event have to be designated by an IAEA Member State or should be members of organizations that have been invited to attend.

In order to be designated by an IAEA Member State, participants are requested to send the **Participation Form (Form A)** to their competent national authority (e.g., Ministry of Foreign Affairs, Permanent Mission to the IAEA or National Atomic Energy Authority) for onward transmission to the IAEA by **26 August 2022**. Participants who are members of an organization invited to attend are requested to send the **Participation Form (Form A)** through their organization to the IAEA by the above deadline.

Selected participants will be informed in due course on the procedures to be followed with regard to administrative and financial matters.

Please note that the IAEA is in a transition phase to manage the entire registration process for all regular programme events electronically through the new InTouch+ (<https://intouchplus.iaea.org>) facility, which is the improved and expanded successor to the InTouch platform that has been used in recent years for the IAEA’s technical cooperation events. Through InTouch+, prospective participants will be able to apply for events and submit all required documents online. National authorities will be able to use InTouch+ to review and approve these applications. Interested parties that would like to use this new facility should write to: InTouchPlus.Contact-Point@iaea.org.

Papers and Presentations

The IAEA encourages participants to give presentations on the work of their respective institutions that falls under the topics listed above.

Participants are requested to submit an abstract of their work. The abstract will be reviewed as part of the selection process for presentations. The abstract should be in A4 page format, should extend to no more than two pages (including figures and tables). It should be sent electronically to Ms Felicia Dragolici, the Scientific Secretary of the event (see contact details below), not later than **26 August**

2022. Authors will be notified of the acceptance of their proposed presentations by **Acceptance Deadline**.

In addition, participants should submit the abstract together with the **Participation Form (Form A)** and the attached **Form for Submission of a Paper (Form B)** to their competent national authority (e.g., Ministry of Foreign Affairs, Permanent Mission to the IAEA or National Atomic Energy Authority) or their organization for onward transmission to the IAEA not later than **26 August 2022**.

The maximum number of attendees at the event will depend on meeting logistics. Consequently, priority will be given to attendees who intend to share either a presentation or a poster.

Expenditures and Grants

No registration fee is charged to participants.

The IAEA is generally not in a position to bear the travel and other costs of participants in the event. The IAEA has, however, limited funds at its disposal to help meet the cost of attendance of certain participants. Upon specific request, such assistance may be offered to normally one participant per country, provided that, in the IAEA's view, the participant will make an important contribution to the event.

The application for financial support should be made using the **Grant Application Form (Form C)**, which has to be stamped, signed and submitted by the competent national authority to the IAEA together with the **Participation Form (Form A)** by **26 August 2022**.

Venue

The event will be held at the Vienna International Centre (VIC), where the IAEA's Headquarters are located. Participants must make their own travel and accommodation arrangements.

General information on the VIC and other practical details, such as a list of hotels offering a reduced rate for IAEA participants, are listed on the following IAEA web page:

<http://www-pub.iaea.org/iaeaevents/GeneralInfo/Guide/VIC>.

The event will begin at 09:30 on Monday, 10 October in Room M3, Building M of the VIC. Participants are advised to arrive at Checkpoint 1/Gate 1 of the VIC one hour before the start of the event on the first day in order to allow for timely registration. Participants will need to present an official photo identification document in order to be admitted to the VIC premises.

Visas

Participants who require a visa to enter Austria should submit the necessary application to the nearest diplomatic or consular representative of Austria at least four weeks before they travel to Austria. Since Austria is a Schengen State, persons requiring a visa will have to apply for a Schengen visa. In States

where Austria has no diplomatic mission, visas can be obtained from the consular authority of a Schengen Partner State representing Austria in the country in question.

IAEA Contacts

Scientific Secretary:

Ms Felicia Nicoleta Dragolici

Division of Nuclear Fuel Cycle and Waste Technology

Department of Nuclear Energy

Vienna International Centre

PO Box 100

1400 VIENNA

AUSTRIA

Tel.: +43 1 2600 26097

Fax: +43 1 26007

Email: F.N.Dragolici@iaea.org

Administrative Secretary:

Ms Marina Tolstenkova

Division of Nuclear Fuel Cycle and Waste Technology

Department of Nuclear Energy

Vienna International Centre

PO Box 100

1400 VIENNA

AUSTRIA

Tel.: +43 1 2600 21968

Email : M.Tolstenkova@iaea.org

Subsequent correspondence on scientific matters should be sent to the Scientific Secretary and correspondence on other matters related to the event to the Administrative Secretary.
