## National priorities

- Human health
- Water and the environment
- Food and agriculture
- Radiation safety and nuclear security
- Energy planning

## Main areas of IAEA support

- Water resources management
- Human health

## Project successes

### Human health

With IAEA support, a mammography unit was commissioned at the Milton Cato Memorial Hospital, contributing to the reinstatement of mammography services in the public health system.

Additionally, the hospital received a CT scanner and quality control equipment, further enhancing its diagnostic capabilities and medical services.

### Water resources management

The capacity for collecting water samples was enhanced with field equipment provided to the national authority.

## Participation in the major initiatives
