

IAEA Lise Meitner Library

About us

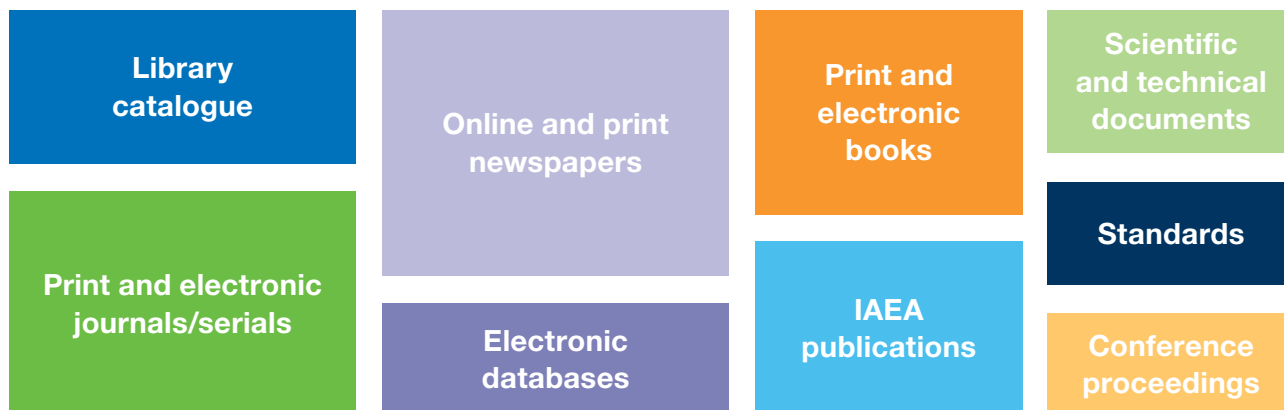

An integral part of the IAEA since its inception in 1957, the library continues to support the IAEA's programmatic activities by providing current, authoritative information resources in all areas of nuclear energy and its applications. In addition to primarily supporting IAEA staff, the library also provides research support to

UN organizations, permanent missions in Vienna, government organizations, nuclear research institutes, laboratories and nuclear libraries/information centres in IAEA Member States. The IAEA Lise Meitner Library is named after Lise Meitner, an Austrian born physicist who was a major contributor to the discovery of nuclear fission in 1938.

Library services

- Research support using advanced search strategies
- Internal loan services
- Interlibrary loan services which include article delivery, document delivery, and book exchange
- Individual or group orientation sessions
- Customized workshops about the library resources and services
