Period: 2005-01-01 to 2009-04-17 Go

Welcome to TC Country Profile

The purpose of TC Country Profile is to provide, at the Country level, online and up-to-date combined information (general, financial, statistical and links) about the technical cooperation programme and activities. When accessing TC Country Profile via Internet, each country can only see its own data.

The [Print Summary](#) under General Menu provides a summary information on the country, containing a list of projects, financial and human resource tables.

Site updates

New!!! 31-October-2008

You can search for resource institutions that have had some involvement within the Technical Cooperation Programme (those that have either provided experts, organized training courses, provided lecturers and/or hosted fellows or scientific visitors). You can find the link in the General menu or you can access the search page [here](#). Additionally you can view a short demo about using the search facility by clicking [here](#).

Please send your questions, comments and suggestions to [TC PRIDE contact point](#).

TC programming, monitoring and reporting

PCMF

- Programme Cycle Management Framework
- IT system to develop and manage TC projects from project concept submission through project design, approval, implementation, monitoring, reporting and review. It provides all stakeholders with access to their projects and facilitates interaction between members of the project team.
- Restricted access (same login and password as for TC PRIDE); users can only see information on their projects.
- <http://pcmf.iaea.org>

IAEA

Major Steps in the Programme Cycle Management Framework I

Phase I

1. Concept Identification/submission
2. Concept pre-qualification
3. Prioritisation

Phase II

4. Project design and formulation
5. Resourcing and Budgeting
6. Approval (TACC/Board)

Major Steps in the Programme Cycle Management Framework II

Phase III

- Operational Execution (IAEA inputs) in accordance with agreed project work plan – linked to TC-PRIME
- Monitor Progress on planned activities
- Assess Performance & make adjustments (budget & work plan through inputs)
- Transparent Monitoring (to come)

PCMF - Member State Roles

- ➔ **NLO – National Liaison Officer.** Reviews, comments on and set priority for all projects for the Member State s/he belongs to. Adds/Removes CPs.
- ➔ **NLA – National Liaison Assistant.** Can perform all tasks an NLO can under the direction of NLO (optional).
- ➔ **NCR – National Coordinator for Regional Agreements.** Coordinates within the regional agreement specific regional project(s). Designs and comments on regional projects in collaboration with PMO and TO. Adds/Removes CPs.
- ➔ **CP – Project Counterpart.** Designs both national and regional projects in collaboration with PMO and TO.

New Project Categories

The TC programme now has two project categories: **new** and **ongoing**. These categories are defined as follows:

New projects are created:

- To support a new request for assistance;
- To start a new phase following the implementation of a previous project, due to change in the objective/outcomes in relation to the assistance already provided.

An **ongoing** project is a multiyear project, previously approved by the Board of Governors (BoG) that is implemented according to the already approved objective/outcomes and timeframe.

The new project categorization terminology will be used for the first time in the documentation presented to the Technical Assistance and Cooperation Committee (TACC)/BoG in November 2008.

Duration

All projects have a specified timeframe, in line with the stated objectives and workplan, of a maximum of five years. If rephasing is necessary due to delays in implementation, the project duration can be extended by up to one year, maintaining the original objective/outcomes.

A streamlined approach to projects

- A new project is approved once by the TACC/BoG. This approval covers the entire lifecycle of the project.
- Project budgets for each year are approved annually by the TACC/BoG.

Background

[Export to Excel](#)

Concept No:	ARG2006001
Country Code(s):	ARG
Title:	Human Resource Development and Nuclear Technology Support
Classification:	New
Project Number:	ARG0011
Justification:	The development of nuclear technology applications requires highly qualified technicians. For this reason Argentina's programme is designed to upgrade and strengthen the skills and capabilities of human resources in Argentina.
End Users/ Beneficiaries:	The end users will be the population in agriculture, medicine and in the industrial sectors, who will receive the benefits of nuclear technology applications.
Project Strategy/ Implementation	The project is being implemented by the National Atomic Energy Commission in Argentina, the official nuclear organization in the nuclear field.
