

GIFT FROM FINLAND

An instrument worth \$19 000 for the analysis of nuclear radiation, donated by Finland to IAEA, was handed over by the Finnish Ambassador, Mr. Otso Wartiovaara, to the Director General of IAEA, Dr. Sigvard Eklund, at the Agency's laboratory at Seibersdorf on 22 January.

The instrument, a multi-channel analyzer with 512 channels, was constructed in Finland. It is being used in connection with all the major Agency projects underway at Seibersdorf, such as the standardization of radionuclides, agricultural research, and analytical work carried out at the request of Member States.

Left to right: Dr. Eklund, Mr. Wartiovaara, and Professor Leo Yaffe of the Agency's Division of Research and Laboratories.
